Subject: Golden Renewable ??

Hello Judith,

This company is based in Yonkers NY. Do you know anything about them or their technology? How are they different from ConcordBlue/Lockheed Martin?

Thank you so much.

GRE has designed, built, tested and is producing fuel at a commercial rate from its Renewable Fuel Production (“RFP”) unit. GRE is taking waste products that municipalities pay to have removed – and converting that waste into EPA certified fuel products such as diesel (ASTM D975), home heating oil (ASTM D396), or electricity. The process from the machine mimics the

natural geological processes involved in the production of fossil fuels.

Headquartered in Yonkers, New York, GRE was founded in December 2010 by Nicholas T. Canosa, President and CEO of GRE. Until recently, the GRE management and engineering group have been optimizing its RFP Unit, which allows it to take and process waste plastics and on a commercial scale produce diesel fuel.

Now completed, the RFP Unit produces fuel that is sold to New York based home heating fuel distributors.
